VizItCards – Plagiarism Checker

Your goal today is to design a user interface for a plagiarism checker.

An accusation of plagiarism towards a suspicious document needs to be supported by evidence. There are algorithms that can help detect plagiarism, but these are not always reliable and need to be checked by a human "expert."

Given a **suspicious document (or documents)** and other sources (**original sources**) that could be possibly used without proper reference, anti-plagiarizing experts (teachers, students, communities and etc.) need a visualization tool to assist the *verification*, *assessment*, *and presentation* of the relationship between the suspicious document and original sources.
